

In the Claims:

1. (Currently Amended) A bag comprising side walls which are substantially impervious to moisture and having an opening at one end which is adapted to be sealed, a portion of one of the side walls comprising a substantially transparent material which is substantially impervious to moisture and a first moisture indicating material directly mounted ~~within the bag~~ to the side wall, and adjacent to the transparent material to enable the first moisture indicating material to be viewed through the transparent material, and at least a portion of the first moisture indicating material ~~being exposed to air~~ within the interior of the bag, wherein one of the side walls of the bag further comprises a desiccant material which defines at least a portion of an inner surface of the side wall.
2. (Canceled)
3. (Previously Presented) A bag according to claim 1, wherein the desiccant material comprises a silica gel.
4. (Original) A bag according to claim 1, wherein the side walls of the bag comprise a laminated material.
5. (Original) A bag according to claim 4, wherein the laminated material comprises a metal foil.
6. (Original) A bag according to claim 1, wherein the substantially transparent material comprises a transparent moisture barrier film.

7. (Original) A bag according to claim 1 in combination with an electronic device, the electronic device being sealed within the bag.

8. (Original) A bag according to claim 1 in combination with a packaged semiconductor device, the packaged semiconductor device being sealed within the bag.

9-14. (Canceled)

15. (Currently Amended) A bag according to claim [[9]] 1, further comprising:

a second moisture indicating material ~~level-indicator~~ mounted within the bag adjacent to the transparent material to enable the second moisture indicating material to be viewed through the transparent material, wherein at least a portion of the second moisture indicating material ~~level-indicator~~ is exposed to air within the bag; and

a third moisture indicating material ~~level-indicator~~ mounted within the bag adjacent to the transparent material to enable the third moisture indicating material to be viewed through the transparent material, wherein at least a portion of the third moisture indicating material ~~level-indicator~~ is exposed to air within the bag.

16. (Currently Amended) A bag according to claim 15 wherein the first moisture indicating material ~~level-indicator~~ provides a first warning that moisture in the bag is approaching a danger level, wherein the second moisture indicating material ~~level-indicator~~ provides an intermediate warning that indicates to a user to put the electronics device into a new bag, and wherein the third moisture indicating material ~~level-indicator~~ provides a warning that moisture levels have exceeded a recommended maximum level.

17-20. (Canceled)

21. (Previously Presented) A bag according to claim 1, wherein the side walls of the bag comprise a layer of the desiccant material on the inside.

22. (Previously Presented) A bag according to claim 21, wherein the desiccant material is located within a porous bag.

23. (Previously Presented) A bag according to claim 4, wherein the side walls of the bag comprise the laminated material on the outside and a layer of the desiccant material on the inside.
